

TECHNICAL BULLETIN · JUNE 15, 2010

Be Advised: NDS is announcing an update to existing technical installation recommendations and product packaging of EZ Roll™ Gravel Paver Products.

Part numbers affected: GP4X150, GP4X150G, GP4X150T, GP4X150R, GPCLIP, GPSTAKE
Effective Date: 6-14-2010

Background:

Prior to this announcement, NDS has recommended the use of metal clips and steel stakes as a method by which to secure Gravel Paver product rolls together to make one integral paver mat. While this was effective in a number of installations, NDS has since modified these instructions to recommend the use of stakes only.

What's New:

The table below highlights the differences between the old and new processes:

Process Affected	Old Process	New Process
Packaging	Shipped with every roll: 150 clips, 10 stakes	Shipped with every roll: 40 stakes, Staking Diagram, and Technical Bulletin
Installation	Guidelines recommended using clips and stakes	New guidelines recommend using stakes only, per the Staking Diagram NDS provides
Product Offering	GPCLIP and GPSTAKE offered for purchase	GPSTAKE (pack of 60 stakes) will remain available in case additional stakes are needed

What Else You Need to Know:

Any pinning or staking instructions in a publication dated prior to this June 14 2010 announcement are outdated – please refer to the recommended Staking Diagram for the most up-to-date information.

Copies of this Technical Bulletin and the new Staking Diagram will be available on www.ndspro.com – the Gravel Paver product page can be found from the main menu or at <http://www.ndspro.com/permeable-pavers/gravel-pavers/ez-roll-gravel-pavers/>.
